

Juggler of "Nuit Des Troubadours"

Enigma n°9

25th June 2024

A CentraleSupélec student is performing at the NDT ("Nuit Des Troubadours"). To please the scientific audience, he claims that at some point, the sum of the balls numbers will be equal in all ellipses. The balls are labeled from 1 to 9 (and balls are all labeled with a different number).

Reading from left to right, what number is formed by the juggler?

Give the smallest of all the possibilities.
